

Title: *Technology Transfer of Extension Recommendations*

Investigators: C.E. Wilson, Jr., J. Branson, and S. Runsick

This funding was provided to publish a rice production handbook that includes the most up-to-date technology and research-based recommendations for economically and environmentally sound rice production in Arkansas.

The MP 192 has been the primary source of recommendations and rice management for growers, consultants, and agents for several decades. Since the last printing of the MP192 “Rice Production Handbook” in 2000, new recommendations have been made from research and registration of new pesticides.

The revised handbook is expected to be printed and distributed to clientele by May, 2006. Quantity for printing is 10,000.
